

The Bug reality

by SuperBonBon

1. Bugs, what can I do?

Although our software is normally well tested, bugs can appear. If you find such things you can still go to the [forum](#) and follow the appropriate project's bug report thread.

Please make sure to include as much information as possible (logs) so that the bug can be reproduced and fixed within a decent period of time.

2. Is it really a bug ?

Sometimes bugs aren't really bugs, but rather configuration, OS-environment related problems, JDK problems, an unstable Windows installation...

Before you fill out a bug report make sure that you have followed the installation and configuration instructions correctly.
